PRODUCTS

Crude oil

An oily, flammable liquid that occurs naturally in deposits, usually beneath the surface of the earth. It consists principally of a mixture of hydrocarbons, with traces of various nitrogenous and sulphurous compounds. During the past 600 million years, incompletely decayed plant and animal remains have become buried under thick layers of rock. It is believed that petroleum consists of the remains of these organisms but it is the small microscopic plankton organism remains that are largely responsible for the relatively high organic carbon content of fine-grained sediments which are the principle source rocks for petroleum.

Little use other than as lamp fuel was made of petroleum until the development of the gasoline engine and its application to automobiles, trucks, tractors and airplanes. Today the world is heavily dependent on petroleum for motive power, lubrication, fuel, dyes, drugs and many synthetics.

Natural gas

Natural mixture of gaseous hydrocarbons found issuing from the ground or obtained from specially driven wells. The composition of natural gas varies in different localities. Its chief component, methane, usually makes up from 70% to 95% and the balance is composed of varying amounts of ethane, propane, butane and other hydrocarbon compounds. Although commonly associated

with deposits, it also occurs separately in sand, sandstone and limestone deposits. Some geologists theorize that natural gas is a byproduct of decaying vegetable matter in underground strata, while others think it may be primordial gases that rise up from the mantle. Because of its flammability and high calorific value, natural gas is used extensively as an illuminant and a fuel.

LPG

LPG is a mixture of gases, chiefly propane and butane, produced commercially from petroleum and stored under pressure to keep it in a liquid state. The boiling point of liquefied petroleum gas varies from about -44°C to 0°C , so that the pressure required to liquefy it is considerable and the containers for it must be of heavy steel. Common uses are for cooking and heating and lighting. It is also used for powering automotive vehicles. LPG is an attractive fuel for internal- combustion engines because it burns with little air pollution and little solid residue.

Solvent oil

Solvent oil is one of the five major oil products closely related to people's daily life. Its application sectors also have a constant expansion. There are also extensive uses in rubber, leather and adhesive sectors.

Sulphur

Solid Sulphur occurs principally in three forms, all of which are brittle, yellow in color, odorless, tasteless, and insoluble in water. It is a chemically active element and forms many compounds, both by itself (sulfides) and in combination with other elements. It is part of many organic compounds.

Sulphur is used in black gunpowder, matches and fireworks; in the vulcanization of rubber; as a fungicide and insecticide; and in the treatment of certain skin diseases. The principal use of Sulphur is in the preparation of its compounds. The most important Sulphur compound is Sulphuric acid.

CHAIRMAN'S STATEMENT

It gives me great pleasure to welcome you to the 66th Annual General Meeting of the Company and to present the Company's Annual Report and Audited Financial Statements for the year ended June 30, 2017.

Results

In this year the Company has earned profit after tax of Rs 9.678 billion (2016: Rs. 7.234 billion). Increase in profit is mainly because of higher crude oil production and reduced exploration costs. In this year production of crude oil, gas and LPG increased by 8.23%, 3.81% and 7.44% respectively.

The results of the Company's operations are dealt with in further detail in the annexed Directors' Report and Financial Statements.

Outlook

During this year Mardankhel-1 a new find has been connected to production facility in the month of Dec, 2016. In the Mardankhel area, Mardankhel-2 and 3 wells have been successfully completed and efforts are under way to connect these wells to production line on priority.

Efforts are underway to make early connection to the production line and appraise discoveries of Makori Deep-1 and Tolanj West-1.

Presently, six wells are under drilling and out of which three well are exploratory. In the year 2017-18 seven more wells will be spudded out of which five wells would be exploratory. The Company is investing a substantial amount to increase its reserve base and with the Grace of Allah we are pretty much hopeful to get new successes.

We are driven by our vision to be the leading oil and gas exploration and production company of Pakistan with ever increasing proven hydrocarbon reserves and continuous and improved production. As we move forward, we have a number of factors in our favor; the strength of our balance sheet, our strong cash generation, our expertise and most of all, the dedication and will of our people.

Acknowledgment

On behalf of the Board, I would like to acknowledge with thanks the contributions made by the management staff, employees, regulatory authorities and various Government functionaries. Without their support these results would not have been possible.

I would also like to thank all the shareholders for their continued support.

The Directors have pleasure in presenting a brief review of the operations and financial results of the Company for the year ended June 30, 2017.

In this year, the Company made a profit after tax of Rs 9,678 million (2016: Rs.7,234 million), which is higher by 33.8% as compared to last year. The profit translates into earnings per share of Rs 40.92 (2016: Rs 30.58 per share). Overall net sales are higher by Rs 2,432 million (9.8%), which is mainly because of 8.23 % higher crude oil production and 12.0% increase in average price of crude oil. This crude oil production is the highest in the last ten years period. Also increase in profit is because of reduced exploration costs as one dry well cost charged to expenses as against two wells costs charged in the corresponding year. Production volume of gas and LPG has increased by 3.81%

and 7.44% respectively. Cost of sale has decreased by 2.9% mainly because of lower operating costs and amortisation which have been compensated by higher royalty due to increased sales revenues.

During the year the Company has made a consolidated profit after tax of Rs. 11,905 million (June 30, 2016: Rs. 10,122 million) which translate into consolidated earnings per share of Rs. 50.23 (June 30, 2016: Rs. 42.65 per share).

The details of the exploration activities are covered in detail by each geographical area later in this report.

Financial results

These are summarized below:	Rs. (000)
Profit for the year after providing for all expenses including depreciation, exploration, amortization and workers' funds.	12,412,293

Risk management

The Board remains committed to the philosophy of effective business risk management as a core managerial competency. The Board has established a structured approach to risk management through the formulation of a risk management policy and system. The Company is in a continuous process to implement, monitor and improve its risk management policy. The

Company's risk management system requires approaching risk identification in a systematic manner by developing an understanding of the Company's strategic and operational objectives, and the opportunities and threats related to the achievement of these objectives as well as analyzing the significant functions undertaken within the Company to identify significant risks which flow from these activities. Risks are required to be formally identified, prioritized and incorporated into a risk management response to effectively address risks.

The following is an outline of some of the material risks being faced by the Company:

- 1. Oil price volatility:** The pricing for the Company's oil and gas production is benchmarked with international prices of crude oil and related products. Any unfavorable variance in the international prices is likely to adversely affect the Company's profitability.
- 2. Exploration risk:** Exploration activity is prone to the risk of not finding commercial quantities of

hydrocarbons due to a number of reasons such as incorrect selection of exploration acreage, poor quality of seismic data, error in processing or interpretation of seismic data, incorrect selection of drilling site. The Company is mitigating exploration risks by using latest technologies and hiring experienced professionals. The Company is in a continuous process to explore new opportunities and increasing the chances of success by joining hands with other E & P companies by way of farm-in and farm-out agreements.

3. **Drilling risk:** Oil and gas drilling inherently is a high risk activity. The Company is exposed to a number of hazards during drilling of wells including well blow out, fishing, fire hazards and personal injury. In addition, the risk of not discovering oil and / or gas as expected would have an adverse affect on earnings. The Company is mitigating these risks by selecting efficient and professional teams and also by having strict criterion for selecting rig and other allied services/equipment. Further, the Company also obtains control of well insurance cover for all drilling wells.
4. **Underperformance of major oil and gas fields:** The Company's future earnings and profitability is dependent upon the production and reserves of its oil and gas fields. The actual production from fields may differ materially from estimates due to possible underperformance of the oil and gas reservoirs or other production related factors.
5. **Procurement planning related risk:** Managing risk in business is not a new phenomenon, but managing it well in a changing global environment is producing some significant challenges, especially for the procurement function. Vulnerability in the procurement process can be seen as a weakness or possible threat to the Company's

profitability.

The vulnerability can give rise to the following risks

- Commercial risks
- Operational – not having materials
- Contractual – exposure to liquidated damages

The company is mitigating these risks by preparing of detailed well prognosis before the spud date and timely placement of procurement orders for long lead items.

6. **Reservoir engineering and process:** The over estimation of reserves and production can lead to investment of significant capital in the form of plant design by the engineering function. As far as practical, the Company obtains third party reserve certification to mitigate this risk.
7. **Environmental regulations:** The Company is subject to laws and regulations relating to health, safety and the environment. Changes to these laws and regulations may result in increased costs of compliance as well as penalties for non-compliance.
8. **Increased competition:** With increased competition in the oil and gas exploration and production sector, particularly in relation to the application and award of exploration concessions, the Company may be faced with higher competition than before. In addition, the Company's LPG marketing business may be adversely affected due to increased competition, decline in margins or disruption to LPG supply sources. The Company is in a continuous process to explore new opportunities by joining hands with other E & P companies by way of farm-in and farm-out agreements. In LPG marketing business, the Company has established a good storage capacity for continuous supply to keep margins intact and continues exploring for sustainable cost-effective sources of further supplies.

9. **Information technology failures:**

The Company's operations may be adversely affected due to information technology failures especially in today's environment of reliance on IT systems, regulation and reporting deadlines. The company has a separate IT wing to control and monitor all related functions especially in relation to back up policy for continuous function.

10. **Economic and political risks:** Volatile economic and financial market conditions resulting from economic or political instability.
11. **Joint Venture Partners:** We are also operating in a joint venture environment and many of our projects are operated by other partners. Our ability to influence partners is sometimes limited, due to our small share in non-operated ventures. Non-alignment on various strategic decisions in joint ventures may result in operational and production inefficiencies or delay. We mitigate this risk by continuous and regular engagement of joint venture partners in operated and non-operated projects.
12. **Terrorist attacks:** A terrorist attack could have a material and adverse effect on our business. The company has taken a terrorist insurance cover of all its material installations to mitigate this risk.
13. **Third party liability:** A third party liability could have a material and adverse effect on our business. In order to mitigate the risk, the company is continuously evaluating the areas where insurance cover is required and has also taken a third party liability insurance which covers its drilling areas, pipelines and material installations.
14. **Lost in hole/damage beyond repair:** During drilling costly equipment are run in the hole for several jobs at different depths. In order to mitigate the risk the Company has its strong control and also taking insurance coverage.

Business process re-engineering & development activities

The Company believes that quality and an unyielding commitment to continuous improvement are indispensable ingredients to achieve success. All processes are subject to continuous evaluation and improvement. Being an Oil and Gas Exploration and Production company, research is an integral activity. Seismic data acquisition, processing and interpretation during geophysical activities involve selection of optimum data acquisition parameters through careful experimental investigation in the field. The Company undertakes comprehensive analysis to calculate the volume of sub-surface hydrocarbon's trap of any area, also uses latest sub-surface imaging technology, before drilling any prospect. Research is also conducted by in-house and outsourced G&G and reservoir studies. Research is also conducted to study to enhance and to maintain recovery from the fields. Apart from the drilling of development wells already mentioned earlier by geographical location the major business development projects under taken during the year are as follows:

Business intelligence (BI)

New reporting mechanism using BI tool and technologies has been implemented to provide better visibility of data across POL.

Employee performance management

BEACON HR, a POL specific Self Service System has been introduced.

POL is not only spending on social welfare activities of its areas of operation but we are also running our own Technical Institute, Higher Secondary Schools and Degree College Khaur aided by well equipped lab facilities, modern library, highly qualified teaching staff and promoting extracurricular activities.

Dr. Rashad Institute of Technical Education

Technical Education plays a vital role in the social and economic development of a nation. Due to their vibrant nature, they are continuously subject to the forces which drive changes in the schools, industry and society. The challenges and opportunities for Vocational and Technical training centers are unique due to the needs of the changing economy and local community.

Early 2015 registration with TEVTA, Lahore was acquired in the Electrical and Electronics technologies. Affiliation with Punjab Board of Technical

Education, Lahore was attained to start the Diploma in Associate Engineering (03 years course) in the above mentioned two fields in September, 2015. People of Khaur and its adjacent areas are employed in petroleum and other technical fields of petroleum technology. Therefore, syllabus of petroleum was sent to TEVTA board for review / approval and then registration and affiliation was attained from TEVTA and PBTE, Lahore. In the year 2016 DAE in petroleum technology was also started in Dr. Rashad Institute of Technical Education Khaur to help the local people. Now we have 17 students in D.A.E Petroleum Technology

Under the banner ship of technical college, the college managed to get a “Vocational Training Provision Contract” with the Punjab Skills Development Fund (PSDF), which was signed on December 14, 2016.

In year 2017 short courses of Electrician and Motor Winder were started and 25 students were admitted in each class. These courses were of 06 months duration, all the students passed with flying colors and some of them have been able to get employment in different industries, e.g. new Islamabad Airport, Heavy Industries Taxila, Heavy Mechanical Complex Taxila, etc.

Basic needs of the rural people are met by POL by making the access to safe drinking water easy and less time consuming. Several projects have been undertaken in this regard.

POL has spent money and time on the development of water supply schemes in different villages located around its Pariwali and Meyal fields. These projects range from installation of motor pumps and construction of overhead water tanks to setting up a wide distribution network to supply clean drinking water to more than 6,500 households in several villages. 4. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

4.1 Basis of measurement

These financial statements have been prepared under the historical cost convention except as otherwise disclosed in the respective accounting policy notes.

4.2 Operating segments

Operating segments are reported in a manner consistent with the internal reporting provided to the chief operating decision-maker. The chief operating decision-maker, who is responsible for allocating resources and assessing performance of the operating segments, has been identified as the Board of Directors that makes strategic decisions. The management has determined that the Company has a single reportable segment as the Board of Directors views the Company's operations as one reportable segment.

Notes to and Forming Part of the Financial Statements

For the year ended June 30, 2017

ANNUAL REPORT 2017

112

4.5 Taxation

Provision for current taxation is based on taxable income at applicable tax rates, adjusted for royalty payments to the Government.

Deferred tax is accounted for on all temporary differences using the liability method. Deferred tax liability has been calculated at the estimated effective rate of 30% after taking into account availability of future depletion allowance and set off available in respect of royalty payments to the Government.

4.6 Provisions

Provisions are recognized when the Company has a legal or constructive obligation as a result of past events, when it is probable that an outflow of resources will be required to settle the obligation and a reliable estimate of the amount can be made.

4.7 Provision for decommissioning costs

Provision for decommissioning costs is recognized in full for development wells and production facilities. The amount recognized is the present value of the estimated cost to abandon a well and remove production facilities. A corresponding intangible asset of an amount equivalent to the provision is also created and is amortized on unit of production basis over the total proved developed reserves of the field or @ 5% where the life of a field is more than 20 years.

Most of these abandonment and removal events are many years in the future and the precise requirements that will have to be met when the abandonment and removal event actually occurs are uncertain. Abandonment and asset removal technologies and costs are constantly changing, as are political, environmental, safety and public expectations. Consequently, the timing and amount of future cash flows are subject to significant uncertainty.

The timing and amount of future expenditures are reviewed annually, together with the interest rate to be used in discounting the cash flows.

The effect of changes resulting from revisions to the estimate of the liability are incorporated on a prospective basis.

The decommissioning cost has been discounted at a real discount rate ranging from 1.14% p.a. to 2.67% p.a. (2016: 1.74% p.a.). The increase in provision due to unwinding of discount is recorded as finance cost.

4.8 Employee compensated absences

The Company provides for compensated absences for all eligible employees in accordance with the rules of the Company.

Notes to and Forming Part of the Financial Statements

For the year ended June 30, 2017

4.9 Staff retirement benefits

The Company operates the following staff retirement benefits plans:

- (i) A pension plan for its management staff and a gratuity plan for its management and non-management staff. The pension and gratuity plans are invested through approved trust funds. Both are defined benefit final salary plans. The pension and gratuity plans are complementary plans for management staff. Pension payable to management staff is reduced by an amount determined by the actuary equivalent to amount paid by the gratuity fund. Management staff hired after January 1, 2012 are only entitled to benefits under gratuity fund. Actuarial valuations are conducted annually using the "Projected Unit Credit Method" and the latest valuation was conducted as at June 30, 2017.

Actuarial gain and losses arising from experience adjustments and change in actuarial assumptions are charged or credited to equity in other comprehensive income in the period in which they arise.

Past service costs are recognized immediately in income.

Since both are complementary plans, combined details and valuation for pension plan and gratuity plan are given in note 36.

- (ii) Separate approved contributory provident funds for management and non-management employees for which contributions are made by the company and the employee at the rate of 10% of basic salary.

4.10 Trade and other payables

Liabilities for trade and other payables are carried at cost which is the fair value of the consideration to be paid in future for goods and services received.

4.11 Contingent liabilities

A contingent liability is disclosed when the Company has a possible obligation as a result of past events, whose existence will be confirmed only by the occurrence or non-occurrence, of one or more uncertain future events not wholly within the control of the Company; or the Company has a present legal or constructive obligation that arises from past events, but it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation, or the amount of the obligation cannot be measured with sufficient reliability.

ANNUAL REPORT 2017

114

4.12 Property, plant and equipment

Property, plant and equipment are stated at cost less accumulated depreciation and impairment losses except for freehold land and capital work in progress, which are stated at cost.

Depreciation is provided on straight line method at rates specified in note 12.1 to the financial statements. Depreciation is charged on additions from the month the assets become available for the intended use up to the month in which these are derecognized.

Maintenance and normal repairs are charged to income as and when incurred. Major renewals and improvements are capitalized and the assets so replaced, if any, are retired. Gains and losses on derecognition of assets are included in income currently.

4.13 Exploration assets/ costs and development costs

4.13.1 Exploration and development costs are accounted for using the "Successful Efforts Method" of accounting.

4.13.2 Exploration costs

All exploration costs, other than those relating to exploratory drilling, are charged to income as incurred. Exploratory drilling costs i.e. costs directly associated with drilling of an exploratory well, are initially capitalized pending determination of proven reserves. These costs are either charged to income if no proved reserves are found or transferred to development costs if proved reserves are found.

All capitalized costs are subject to review for impairment at least once a year and any impairment determined is immediately charged to income.

4.13.3 Development costs

Development costs are stated at cost less accumulated amortization and impairment losses. Expenditure on drilling of development wells, including unsuccessful development wells, is capitalized within development costs. Capitalized development costs are amortized on a unit of production basis over the total proved developed reserves of the field or @ 5% per annum where the life of the field is more than 20 years.

4.14 Investments in subsidiary and associated companies

These investments are carried at cost less impairment losses. The profits and losses of the subsidiary and associated companies are carried forward in the financial statements of the subsidiary and associated companies and not dealt within or for the purpose of these financial statements except to the extent of dividend declared by the subsidiary and associated companies. Gain and loss on disposal of investment is included in income currently.

Notes to and Forming Part of the Financial Statements

For the year ended June 30, 2017

4.15 Stores and spares

Stores and spares are valued at cost determined on moving average formula less allowance for obsolete items. Stores in transit are stated at invoice value plus other charges paid thereon.

4.16 Stock in trade

Stocks are valued at the lower of average annual cost (including appropriate production overheads) and net realizable value. Net realizable value is determined on the basis of estimated selling price of the product in the ordinary course of business less costs necessary to be incurred for its sale.

4.17 Impairment of non-financial assets

Assets that have an indefinite useful life, for example land, are not subject to depreciation and are tested annually for impairment. Assets that are subject to depreciation are reviewed for impairment at each balance sheet date, or wherever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognized for the amount for which the asset's carrying amount exceeds its recoverable amount. An asset's recoverable amount is the higher of its fair value less costs to sell and value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows. Non-financial assets that suffered an impairment are reviewed for possible reversal of the impairment at each balance sheet date. Reversals of the impairment loss are restricted to the extent that asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortization, if no new impairment loss had been recognized. An impairment loss or reversal of impairment loss is recognized in income for the year.

4.18 Financial instruments

Financial assets and liabilities are recognized when the Company becomes a party to the contractual provisions of the instrument and de-recognized when the Company loses control of the contractual rights that comprise the financial assets and in case of financial liabilities when the obligation specified in the contract is discharged, cancelled or expired. All financial assets and liabilities other than at fair value through profit or loss assets and liabilities are initially recognized at fair value plus transaction costs. Financial assets and liabilities carried at fair value through profit or loss are initially recognized at fair value, and transaction costs are charged to income for the year. These are subsequently measured at fair value, amortized cost or cost, as the case may be. Any gain or loss on derecognition of financial assets and financial liabilities is included in income for the year.

ANNUAL REPORT 2017

4.19 Financial assets

The Company classifies its financial assets in the following categories: investments at fair value through profit or loss, held-to-maturity investments, loans and receivables, and available for sale investments. The classification depends on the purpose for which the financial assets were acquired. Management determines the classification of its financial assets at initial recognition. Regular purchases and sales of financial assets are recognized on the trade-date – the date on which the company commits to purchase or sell the asset.

(i) Investments at fair value through profit or loss

Investments classified as investments at fair value through profit or loss are initially measured at cost being fair value of consideration given. At subsequent dates these investments are measured at fair value with any resulting gains or losses charged directly to income. The fair value of such investments is determined on the basis of prevailing market prices.

(ii) Held-to-maturity investments

Investments with fixed payments and maturity that the Company has the intent and ability to hold to maturity are classified as held-to-maturity investments and are carried at amortized cost less impairment losses.

(iii) Loans and receivables

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. They are included in current assets, except for maturities greater than 12 months after the balance sheet date. These are classified as non-current assets. The Company's loans and receivables comprise 'Long term loans and advances', 'Trade debts', 'Advances, deposits and other receivables', and 'Cash and bank balances' in the balance sheet. Loans and receivables are carried at amortized cost using the effective interest method less allowance for any uncollectible amounts.

An allowance for uncollectible amounts is established when there is objective evidence that the Company will not be able to collect all amounts due according to the original terms. Significant financial difficulties of the counter party, probability that the counter party will enter bankruptcy or financial reorganization, and default or delinquency in payments (more than the credit period specified in sales agreements) are considered indicators that the amount is uncollectible. When the amount is uncollectible, it is written off against the allowance.

(iv) Available-for-sale investments

Available-for-sale financial assets are non-derivatives that are either designated in this category or not classified in any of the other categories. They are included in non-current assets unless management intends to dispose of the investment within 12 months of the balance sheet date.

Notes to and Forming Part of the Financial Statements

For the year ended June 30, 2017

Available-for-sale investments are initially recognized at cost and carried at fair value at the balance sheet date. Fair value of a quoted investment is determined in relation to its market value (current bid prices) at the balance sheet date. If the market for a financial asset is not active (and for unlisted securities), the Company establishes fair value by using valuation techniques/ Net Asset Values (NAVs) quoted by the respective Asset Management Company. Adjustment arising from remeasurement of investment to fair value is recorded in the statement of comprehensive income and taken to income on disposal of the investment or when the investment is determined to be impaired.

4.20 Impairment of financial assets

The Company assesses at the end of each reporting period whether there is objective evidence that a financial asset or group of financial assets is impaired. A financial asset or a group of financial assets is impaired and impairment losses are incurred only if there is objective evidence of impairment as a result of one or more events that occurred after the initial recognition of the asset (a 'loss event') and that loss event (or events) has an impact on the estimated future cash flows of the financial asset or group of financial assets that can be reliably estimated.

4.21 Offsetting

Financial assets and liabilities are offset and the net amount is reported in the balance sheet if the Company has a legally enforceable right to setoff the recognized amounts and the Company intends to settle on a net basis, or realize the asset and settle the liability simultaneously.

4.22 Revenue recognition

Revenue from sales is recognized on dispatch of products to customers. Revenue from services is recognized when the related services are rendered. Effect of adjustment, if any, arising from revision in sale price is reflected as and when the prices are finalized with the customers and/or approved by the Government.

Income on held-to-maturity investments and bank deposits is recognized on time proportion basis using the effective yield method.

Dividend income is recognized when the right to receive dividend is established.

4.23 Joint arrangements

Investments in joint arrangements are classified as either joint operations or joint ventures depending on the contractual right and obligations of the parties to the arrangement. The company has assessed the nature of its joint arrangements and determined them to be joint operations. The company has recognized its share of assets, liabilities, income and expenditure jointly held or incurred under the joint operations on the basis of latest available audited accounts of the joint operations and where applicable, the cost statements received from operators of the joint arrangements for the intervening period upto the balance sheet date.

4.24 Cash and cash equivalents

For the purpose of the cash flow statement, cash and cash equivalents comprise cash in hand, demand deposits and other short term highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of change in value, and finances under mark up arrangements.

4.25 Dividend distribution

Dividend distribution to the shareholders is accounted for in the period in which dividend is declared.

5. CRITICAL ACCOUNTING ESTIMATES AND JUDGMENTS

The preparation of financial statements in conformity with approved accounting standards requires the use of certain accounting estimates. It also requires management to exercise judgment in the process of applying the Company's accounting policies. Estimates and judgments are continually evaluated and are based on historical experience, including expectation of future events that are believed to be reasonable under the circumstances. The areas where various assumptions and estimates are significant to the Company's financial statements or where judgment was exercised in application of accounting policies are as follows:

- i) Estimated crude oil/gas reserves used for amortization of development and decommissioning costs - note 13
- ii) Estimated useful life of property, plant and equipment - note 12.1
- iii) Estimated costs and discount rate used for provision for decommissioning costs - note 4.7

(c) Market risk

Foreign exchange risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates. Foreign exchange risk arises mainly from future commercial transactions or receivables and payables that exist due to transactions in foreign currencies.

The Company is exposed to currency risk arising from currency exposure with respect to the US dollar. Currently foreign exchange risk is restricted to trade debts, bank balances, receivable from/ payable to joint operating partners, payable to suppliers and provision for decommissioning costs.

Financial assets include Rs 9,432,398 thousand (2016: Rs 9,015,982 thousand) and financial liabilities include Rs 10,115,687 thousand (2016: Rs 11,144,291 thousand) which are subject to currency risk.

If exchange rates had been 10% higher/ lower with all other variables held constant, profit after tax for the year would have been Rs 47,147 thousand lower/higher (2016: Rs 144,725 thousand higher/lower).

(ii) Interest rate risk

Interest rate risk represents the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

(iii) Price risk

Price risk represents the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer, or factors affecting all similar financial instruments traded in the market.

The Company is exposed to equity securities price risk because of investments held by the Company and classified on the balance sheet as available for sale. To manage its price risk arising from investments in equity securities, the Company diversifies its portfolio. Diversification of the portfolio is done in accordance with the investment policy of the Company.

Available for sale investments include Rs 6,255 thousand (2016: Rs 5,975 thousand) which were subject to price risk.

35.3.2 Capital risk management

The Company's objectives when managing capital are to ensure the Company's ability not only to continue as a going concern but also to meet its requirements for expansion and enhancement of its business, maximize return of shareholders and optimize benefits for other stakeholders to maintain an optimal capital structure and to reduce the cost of capital.

In order to achieve the above objectives, the Company may adjust the amount of dividends paid to shareholders, issue new shares through bonus or right issue or sell assets to reduce debts or raise debts, if required.

Consistent with others in the industry, the Company monitors capital on the basis of the gearing ratio. The gearing ratio of the Company has always been low and the Company has mostly financed its projects and business expansions through equity financing. Further, the Company is not subject to externally imposed capital requirements.

35.3.3 Fair value of financial assets and liabilities

36.10 Sensitivity analysis

The calculation of the defined benefit obligation is sensitive to assumptions set out above. The following table summarizes how the impact on the defined benefit obligation at the end of the reporting period would have increased/ (decreased) as a result of a change in respective assumptions by one percent.

4. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

4.1 Basis of measurement

These financial statements have been prepared under the historical cost convention except as otherwise disclosed in the respective accounting policies notes.

4.2 Basis of consolidation

The consolidated financial statements include the financial statements of POL and its subsidiary CAPGAS with 51% holding (2016: 51%).

a) Subsidiary

Subsidiaries are all entities (including structured entities) over which the Company has control. The Company controls an entity when the Company is exposed to, or has right to, variable returns from its involvement with the entity and has the ability to affect those returns through its power over the entity. Subsidiaries are fully consolidated from the date on which control is transferred to the Company. They are deconsolidated from the date that control ceases.

The assets and liabilities of subsidiary company have been consolidated on a line by line basis and the carrying value of investments held by the parent company is eliminated against the subsidiary shareholders' equity in the consolidated financial statements.

Material intra-group balances and transactions have been eliminated.

Non - controlling interests are that part of the net results of the operations and of net assets of the subsidiary attributable to interests which are not owned by the parent company. Non - controlling interest are presented as a separate item in the consolidated financial statements.

b) Associates

Associates are all entities over which the company has significant influence but not control, generally accompanying a shareholding of between 20% and 50% of the voting rights. Investment in associates are

Notes to and Forming Part of the Consolidated Financial Statements

For the year ended June 30, 2017

ANNUAL REPORT 2017

164

accounted for using the equity method of accounting. Under this method, the investment is initially recognized at cost, and the carrying amount is increased or decreased to recognise the investor's share of the profit or loss of the investee after the date of acquisition. The Company's investment in associates includes goodwill identified on acquisition.

If the ownership interest in an associate is reduced but significant influence is retained, only a proportionate share of the amounts previously recognized in other comprehensive income is reclassified to profit and loss account where applicable.

The Company's share of post-acquisition profit is recognized in the profit and loss account, and its share of post-acquisition movements in other comprehensive income is recognized in other comprehensive income with the corresponding adjustment to the carrying amount of the investment. When the Company's share of losses in an associate equals or exceeds its interest in the associate, including any other unsecured receivables, the Company does not recognize further losses, unless it has incurred legal or constructive obligations or made payments on behalf of the associate.

The Company determines at each reporting date whether there is any objective evidence in the associate is impaired. If this is the case, the Company calculates the amount of impairment as the difference between the recoverable amount of the associate and its carrying amount and recognises the amount adjacent to share of profit/ (loss) of associates in the profit and loss account.

4.3 Operating segments

Operating segments are reported in a manner consistent with the internal reporting provided to the chief operating decision-maker. The chief operating decision-maker, who is responsible for allocating resources and assessing performance of the operating segments, has been identified as the Board of Directors that makes strategic decisions. The management has determined that the Company has a single reportable segment as the Board of Directors views the Company's operations as one reportable segment.

4.4 Functional and presentation currency

Items included in the financial statements are measured using the currency of the primary economic environment in which the Company operates. The financial statements are presented in Pakistan Rupees, which is the Company's functional currency.

4.5 Foreign currency transactions and translation

Transactions in foreign currencies are recorded at the rates of exchange ruling on the date of transaction. All assets and liabilities in foreign currencies are translated into rupees at the rates of exchange ruling on the date of the balance sheet. Exchange differences are dealt with through the profit and loss account.

4.6 Taxation

Provision for current taxation is based on taxable income at applicable tax rates, adjusted for royalty payments to the Government.

Deferred tax is accounted for on all temporary differences using the liability method. Deferred tax liability of POL has been calculated at the estimated effective rate of 30% after taking into account availability of future depletion allowance and set off available in respect of royalty payments to the Government where as deferred tax liability of CAPGAS has been calculated at applicable tax rate.

4.7 Provisions

Provisions are recognized when the Company has a legal or constructive obligation as a result of past events, when it is probable that an outflow of resources will be required to settle the obligation and a reliable estimate of the amount can be made.

4.8 Provision for decommissioning costs

Provision for decommissioning costs is recognized in full for development wells and production facilities. The amount recognized is the present value of the estimated cost to abandon a well and remove production facilities. A corresponding intangible asset of an amount equivalent to the provision is also created and is amortized on unit of production basis over the total proved developed reserves of the field or @ 5% where the life of a field is more than 20 years.

Most of these abandonment and removal events are many years in the future and the precise requirements that will have to be met when the abandonment and removal event actually occurs are uncertain. Abandonment and asset removal technologies and costs are constantly changing, as are political, environmental, safety and public expectations. Consequently, the timing and amount of future cash flows are subject to significant uncertainty.

The timing and amount of future expenditures are reviewed annually, together with the interest rate to be used in discounting the cash flows.

The effect of changes resulting from revisions to the estimate of the liability are incorporated on a prospective basis.

The decommissioning cost has been discounted at a real discount rate ranging from 1.14% p.a. to 2.67% p.a. (2016: 1.74% p.a.). The increase in provision due to unwinding of discount is recorded as finance cost.

4.9 Employee compensated absences

The Company provides for compensated absences for all eligible employees in accordance with the rules of the Company.

4.10 Staff retirement benefits

The Company and its subsidiary operates the following staff retirement benefits plans:

POL

POL operates the following staff retirement benefits plans:

- (i) A pension plan for its management staff and a gratuity plan for its management and non-management staff. The pension and gratuity plans are invested through approved trust funds. Both are defined benefit final salary plans. The pension and gratuity plans are complementary plans for management staff. Pension payable to management staff is reduced by an amount determined by the actuary equivalent to amount paid by the gratuity fund. Management staff hired after January 1, 2012 are only entitled to benefits under gratuity fund. Actuarial valuations are conducted annually using the "Projected Unit Credit Method" and the latest valuation was conducted as at June 30, 2017.

Notes to and Forming Part of the Consolidated Financial Statements

166

Actuarial gains and losses arising from experience adjustment and change in actuarial assumptions are charged or credited to equity in other comprehensive income in the period in which they arise.

Past service costs are recognized in immediately in income.

Since both are complementary plans, combined details and valuation for pension plan and gratuity plan are given in note 39.

- (ii) Separate approved contributory provident funds for management and non-management employees for which contributions are made by the company and the employee at the rate of 10% of basic salary.

CAPGAS

The subsidiary is operating a non funded gratuity plan for management and non-management employees. The liability for gratuity plan is provided on the basis of actuarial valuation conducted as at June 30, 2017 using the "Project Unit Credit Method".

4.11 Trade and other payables

Liabilities for trade and other payables are carried at cost which is the fair value of the consideration to be paid in future for goods and services received.

4.12 Contingent liabilities

A contingent liability is disclosed when the Company has a possible obligation as a result of past events, whose existence will be confirmed only by the occurrence or non-occurrence, of one or more uncertain future events not wholly within the control of the Company; or the Company has a present legal or constructive obligation that arises from past events, but it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation, or the amount of the obligation cannot be measured with sufficient reliability.

4.13 Property, plant and equipment

Property, plant and equipment are stated at cost less accumulated depreciation and impairment losses except for freehold land and capital work in progress, which are stated at cost.

Depreciation is provided on straight line method at rates specified in note 13 to the financial statements. Depreciation is charged on additions from the month the asset become available for the intended use upto the month in which these are derecognized.

Maintenance and normal repairs are charged to income as and when incurred. Major renewals and improvements are capitalized and the assets so replaced, if any, are retired. Gains and losses on derecognition of assets are included in income currently.

4.14 Intangible assets

These are carried at cost less accumulated amortization and accumulated impairment losses, if any. Amortization is calculated using the straight line method over the period of useful life of the asset at the rates specified in note 16. Costs associated with maintaining intangibles are recognized as expense as and when

Notes to and Forming Part of the Consolidated Financial Statements

For the year ended June 30, 2017

PAKISTAN OILFIELDS LIMITED

incurred. Amortization on additions is charged from the month in which an intangible asset is acquired or capitalized, while no amortization is charged for the month in which the intangible asset is disposed off.

4.15 Exploration assets / costs and development costs

4.15.1 Exploration and development costs are accounted for using the "Successful Efforts Method" of accounting.

4.15.2 Exploration costs

All exploration costs, other than those relating to exploratory drilling, are charged to income as incurred. Exploratory drilling costs i.e. costs directly associated with drilling of an exploratory well, are initially capitalized pending determination of proven reserves. These costs are either charged to income if no proved reserves are found or transferred to development costs if proved reserves are found.

All capitalized costs are subject to review for impairment at least once a year and any impairment determined is immediately charged to income.

4.15.3 Development costs

Development costs are stated at cost less accumulated amortization and impairment losses. Expenditure on drilling of development wells, including unsuccessful development wells, is capitalized within development costs. Capitalized development costs are amortized on a unit of production basis over the total proved developed reserves of the field or @ 5% per annum where the life of the field is more than 20 years.

4.16 Stores and spares

Stores and spares are valued at cost determined on moving average formula less allowance for obsolete items. Stores in transit are stated at invoice value plus other charges paid thereon.

4.17 Stock in trade

Stocks are valued at the lower of average annual cost (including appropriate production overheads) and net realizable value. Net realizable value is determined on the basis of estimated selling price of the product in the ordinary course of business less costs necessary to be incurred for its sale.

Foreign currency transactions

4.18 Impairment of non-financial assets

Assets that have an indefinite useful life, for example land, are not subject to depreciation and are tested annually for impairment. Assets that are subject to depreciation are reviewed for impairment at each balance sheet date, or wherever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognized for the amount for which the asset's carrying amount exceeds its recoverable amount. An asset's recoverable amount is the higher of its fair value less costs to sell and value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows. Non-financial assets that suffered an impairment are reviewed for possible reversal of the impairment at each balance sheet date. Reversals of the impairment loss are restricted to the extent that asset's carrying amount does not exceed the carrying amount that would have been determined,

net of depreciation or amortization, if no new impairment loss had been recognised. An impairment loss or reversal of impairment loss is recognized in income for the year.

4.19 Financial instruments

Financial assets and liabilities are recognized when the Company becomes a party to the contractual provisions of the instrument and de-recognized when the Company loses control of the contractual rights that comprise the financial assets and in case of financial liabilities when the obligation specified in the contract is discharged, cancelled or expired. All financial assets and liabilities other than at fair value through profit or loss assets and liabilities are initially recognized at fair value plus transaction costs. Financial assets and liabilities carried at fair value through profit or loss are initially recognized at fair value, and transaction costs are charged to income for the year. These are subsequently measured at fair value, amortized cost or cost, as the case may be. Any gain or loss on derecognition of financial assets and financial liabilities is included in income for the year.

4.20 Financial assets

The Company classifies its financial assets in the following categories: investments at fair value through profit or loss, held-to-maturity investments, loans and receivables, and available for sale investments. The classification depends on the purpose for which the financial assets were acquired. Management determines the classification of its financial assets at initial recognition. Regular purchases and sales of financial assets are recognized on the trade-date – the date on which the company commits to purchase or sell the asset.

(i) Investments at fair value through profit or loss

Investments classified as investments at fair value through profit or loss are initially measured at cost being fair value of consideration given. At subsequent dates these investments are measured at fair value with any resulting gains or losses charged directly to income. The fair value of such investments is determined on the basis of prevailing market prices.

(ii) Held-to-maturity investments

Investments with fixed payments and maturity that the Company has the intent and ability to hold to maturity are classified as held-to-maturity investments and are carried at amortized cost less impairment losses.

(iii) Loans and receivables

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. They are included in current assets, except for maturities greater than 12 months after the balance sheet date. These are classified as non-current assets. The Company's loans and receivables comprise 'Long term loans and advances', 'Trade debts', 'Advances, deposits and other receivables', and 'Cash and bank balances' in the balance sheet. Loans and receivables are carried at amortized cost using the effective interest method less allowance for any uncollectible amounts.

An allowance for uncollectible amounts is established when there is objective evidence that the Company will not be able to collect all amounts due according to the original terms. Significant financial difficulties of the counter party, probability that the counter party will enter bankruptcy or financial reorganization, and default or delinquency in payments (more than the credit period specified in sales agreements) are considered indicators that the amount is uncollectible. When the amount is uncollectible, it is written off against the allowance.

PAKISTAN OILFIELDS LIMITED

(iv) Available-for-sale investments

Available-for-sale financial assets are non-derivatives that are either designated in this category or not classified in any of the other categories. They are included in non-current assets unless management intends to dispose of the investment within 12 months of the balance sheet date.

Available-for-sale investments are initially recognized at cost and carried at fair value at the balance sheet date. Fair value of a quoted investment is determined in relation to its market value (current bid prices) at the balance sheet date. If the market for a financial asset is not active (and for unlisted securities), the Company establishes fair value by using valuation techniques/ Net Asset Values (NAVs) quoted by the respective Asset Management Company. Adjustment arising from remeasurement of investment to fair value is recorded in the statement of comprehensive income and taken to income on disposal of the investment or when the investment is determined to be impaired.

4.21 Impairment of financial assets

The Company assesses at the end of each reporting period whether there is objective evidence that a financial asset or group of financial assets is impaired. A financial asset or a group of financial assets is impaired and impairment losses are incurred only if there is objective evidence of impairment as a result of one or more events that occurred after the initial recognition of the asset (a 'loss event') and that loss event (or events) has an impact on the estimated future cash flows of the financial asset or group of financial assets that can be reliably estimated.

4.22 Offsetting

Financial assets and liabilities are offset and the net amount is reported in the balance sheet if the Company has a legally enforceable right to set-off the recognized amounts and the Company intends to settle on a net basis, or realize the asset and settle the liability simultaneously.

4.23 Revenue recognition

Revenue from sales is recognized on dispatch of products to customers. Revenue from services is recognized when the related services are rendered. Effect of adjustment, if any, arising from revision in sale price is reflected as and when the prices are finalized with the customers and/or approved by the Government.

Income on held-to-maturity investments and bank deposits is recognized on time proportion basis using the effective yield method.

Dividend income is recognized when the right to receive dividend is established.

4.24 Joint arrangements

Investments in joint arrangements are classified as either joint operations or joint ventures depending on the contractual right and obligations of the parties to the arrangement. The company has assessed the nature of its joint arrangements and determined them to be joint operations. The company has recognized its share of assets, liabilities, income and expenditure jointly held or incurred under the joint operations on the basis of latest available audited accounts of the joint operations and where applicable, the cost statements received from operators of the joint arrangements for the intervening period upto the balance sheet date.

4.25 Cash and cash equivalents

For the purpose of the cash flow statement, cash and cash equivalents comprise cash in hand, demand deposits and other short term highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of change in value, and finances under mark up arrangements.

4.26 Dividend distribution

Dividend distribution to the shareholders is accounted for in the period in which dividend is declared.

5. CRITICAL ACCOUNTING ESTIMATES AND JUDGMENTS

The preparation of financial statements in conformity with approved accounting standards requires the use of certain accounting estimates. It also requires management to exercise judgment in the process of applying the Company's accounting policies. Estimates and judgments are continually evaluated and are based on historical experience, including expectation of future events that are believed to be reasonable under the circumstances. The areas where various assumptions and estimates are significant to the Company's financial statements or where judgment was exercised in application of accounting policies are as follows:

- i) Estimate of recoverable amount of investment in associated companies - note 17
- ii) Estimated crude oil/gas reserves used for amortization of development and decommissioning costs - note 14

Foreign exchange risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates. Foreign exchange risk arises mainly from future commercial transactions or receivables and payables that exist due to transactions in foreign currencies.

The Company is exposed to currency risk arising from currency exposure with respect to the US dollar. Currently foreign exchange risk is restricted to trade debts, bank balances, receivable from/ payable to joint operating partners, payable to suppliers and provision for decommissioning cost.

Financial assets include Rs 9,432,398 thousand (2016: Rs 9,015,982 thousand) and financial liabilities include Rs 10,115,687 thousand (2016: Rs 11,144,291 thousand) which are subject to currency risk.

PAKISTAN OILFIELDS LIMITED

(ii) Interest rate risk

Interest rate risk represents the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

The Company has no significant long term interest bearing financial assets and liabilities whose fair value or future cash flows will fluctuate because of changes in market interest rates.

Financial assets include Rs 14,270,837 thousand (2016: Rs 10,734,226 thousand) and financial liabilities include Rs 8,578,227 thousand (2016: Rs 9,821,240 thousand) which are subject to interest rate risk. Applicable interest rates for financial assets have been indicated in respective notes.

If interest rates had been 1% higher/lower with all other variables held constant, profit after tax for the year would have been Rs 98,469 thousand (2016: Rs 73,878 thousand) higher/lower, mainly as a result of higher/lower interest income from these financial assets.

(iii) Price risk

Price risk represents the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer, or factors affecting all similar financial instruments traded in the market.

The Company is exposed to equity securities price risk because of investments held by the Company and classified on the balance sheet as available for sale. To manage its price risk arising from investments in equity securities, the Company diversifies its portfolio. Diversification of the portfolio is done in accordance with the investment policy of the Company.

Available for sale investments include Rs 6,255 thousand (2016: Rs 5,975 thousand) which were subject to price risk.

38.3.2 Capital risk management

The Company's objectives when managing capital are to ensure the Company's ability not only to continue as a going concern but also to meet its requirements for expansion and enhancement of its business, maximize return of shareholders and optimize benefits for other stakeholders to maintain an optimal capital structure and to reduce the cost of capital.

In order to achieve the above objectives, the Company may adjust the amount of dividends paid to shareholders, issue new shares through bonus or right issue or sell assets to reduce debts or raise debts, if required.

Consistent with others in the industry, the Company monitors capital on the basis of the gearing ratio. The gearing ratio of the Company has always been low and the Company has mostly financed its projects and business expansions through equity financing.
