December 28, 2020

Subject: Notice of Webinar - Understanding the Impact of Approved Amendments in NCCPL Centralized Know Your Customer (KYC) Organization (CKO) Regulations, 2017 & NCCPL Regulations, 2015

Dear Clearing Members/Authorized Intermediaries,

This is in continuation of our previous circular no. **NCCPL/CM/December-20/10** dated **December 10, 2020**, in order to further engage market participants & to increase awareness regarding the steps taken to streamline and digitize the customer onboarding process, NCCPL has organized another understanding (Joint) session in collaboration with Pakistan Stock Exchange (PSX) & Central Depository Company of Pakistan Limited (CDC) on **Wednesday, December 30, 2020, at 03:45 pm.**

Further to the process of Online Account Opening of Customer, as the market participants obtaining information from investors for CRF and KYC forms through their website are required to pass it on electronically to NCCPL for input in NCSS, KIS and CDS. In this regards, an updated technical document detailing the requirement is attached hereunder as Annexure – ‘A’ for information of the Market Participants regarding establishing connectivity between brokers website and NCCPL. – Moreover, the said technical document has been updated in accordance with the feedback and recommendations received from market participants.

Furthermore, the implementation date of aforementioned changes shall be notified soon and the Market Participants willing to use online account opening facility are requested to contact NCCPL at the earliest so that necessary arrangements are in place before live implementation.

To join the live zoom session, kindly click on the below link;

1) Purpose

The purpose of this document is to share details of services that will be exposed by NCCPL and can be used by external platform.

The document also provides the request structure and response detail required for each interface to be consumed for development.

2) Scope

The document discusses the requirements and specifications of NCCPL that will be used to retrieve Online Account Opening Data from Brokers/Vendors.

3) Business Case

This service will receive data from Brokers for easy account opening. Brokers will provide the data according to the agreed structure for “With CKO” system integration.

4) System Assumptions/Requirements

4.1) Application Requirements

Web Service will communicate data over network.

4.2) Communication Model

The interface would support synchronous communication using HTTPS/REST Request Reply technology.

4.3) Security

NCCPL shall issue a username and password for data exchange and authentication.

5) Service Availability time from NCCPL

- NCCPL service will be available to gather data for 22 hours. 2 hours for maintenance shutdown activity
- Service will respond to the clients within specified time (during working day or next working day)
- Service will be available as per NCCPL DTS
- Service will respond on sat/sun or any other holidays

6) Call from NCCPL to service

Service will return confirmation message or error message in case of any issue encountered in provided data.

7) Request Interface

This interface is to be called by Brokers to access NCCPL API for sending data for easy account opening. This service verifies data and return confirmation/error message.

NCCPL shall also share XML definition in form of XSD for request/response interfaces. Request is composed of username/password and an XML containing all the parameters of that request. The response includes XML which contains response data specified in XSD.

Following are the details of request interface:

8) Authorization of Web Service Credentials

KEY= Authorization

Value = USER_ID: PASSWORD: OTP

Example: ONS1234:test:123456 (plain text)

The screenshot displays a REST client interface with the following details:

- Request Method:** POST
- URL:** https://uatview.nccpl.com.pk:7002/NCSSOnline_BDService/BDService/BD
- Headers:**
 - Connection: keep-alive
 - Authorization: HAM00208:test
- Body:** (Empty)
- Status:** 200 OK
- Time:** 550 ms
- Size:** 188 B
- Response (XML):**

```
1 <BDService>
2   <data>
3     <Message>200 = Record Posted Successfully</Message>
4   </data>
5 </BDService>
```

8.3 Response Interface for Basic Data Collection API

S#	Name	Data Type	Description	Example
1	Response Code	VARCHAR (3 Byte)	Code response to request	200
2	Message	VARCHAR (120 Byte)	Message explaining the response code	Provided data is correct and successfully received

10) OTP Resend /OTP Verification API- 'B'

- There are two possible request types;
 - A) Client can obtain the generated OTP again via calling OTP Resend/Verification API.
In case client didn't receive OTP or client lost the OTP, it will submit the request to NCCPL via **Resend OTP Flag**.
NCCPL verify the request and if OTP was previously generated successfully and was not utilized/expired, will resend the OTP to client.

(OR)
 - B) Client can verify the generated OTP, via calling OTP Resend/Verification API.
Client can verify the received OTP by submitting the request to NCCPL via **Verify OTP Flag**.
NCCPL verify the request and matches the OTP within its system and respond to client

9.1 Request Interface

11.3 Response Interface

S#	Name	Data Type	Description	Example
1	Response Code	VARCHAR (3 Byte)	Code response to request	700
2	Message	VARCHAR (120 Byte)	Message explaining the response code	Current Status of PMD, IBAN and UIN will be shared

13) Key Notes:

Attributes (consist of ATR) are referred for Attorney’s information and should be NULL while Account Type is “SKA” i.e. Sahulat.

Attributes (consist of NMN) are referred for Nominee information and can be NULL in any Account Type is “SKA” -- Sahulat or “NKA” Normal.

In this regard we expect that Broker must incorporate proper validations before accepting data from clients and prior forwarding to NCCPL.

Service Consumer, should ensure all Data fields which refer to referential tables must carry values accordingly, NCCPL do not validate these values.

Service Consumer, should ensure all Data fields should be validated at their system as per provided Data-Types and Description, NCCPL do not validate these values.

It should be noted due to large number of fields, basic validations on every field lead service performance issues and the response time of the web service can significantly be increased. However, NCCPL will implement business validations which is required for onward processing of this client information.

In case NCCPL receives data beyond agreed controls, it should not be processed under NCCPL systems.

11.1 Characters not allowed in API

Following special characters are not allowed in **Name** Fields;

'	/	\	-	()	:
;	“	%	\$	#	@	^
